THOUGHTSPOT

Search-Driven Analytics for Humans

Now anyone can be their own data analyst.

ThoughtSpot is disrupting the BI industry with search-driven analytics built for the enterprise. Anyone can use ThoughtSpot with zero training to ask questions, analyze company data, and build reports and dashboards - all in seconds. ThoughtSpot can combine data from on-premise, desktop and cloud sources, and Hadoop, can scale to billions of rows, and can be deployed in hours.

The days of waiting for reports and dashboards are over.

Instant Answers	Massive Scale	Fast Time-to-Value
900X FASTER ANSWERS	**1000s OF USERS**	**85% FASTER TO DEPLOY**
Intelligent search experience guides you to your answer with zero training.	Scales to thousands of users and billions of rows with governance and security.	No need for semantic search modeling or OLAP cubes.

A New Breed of Search Engine for Data Analytics

Search to analyze your data with zero training.

1
Search to Analyze

Get suggestions while you type to help you find the information you need.

2
Get Instant Charts
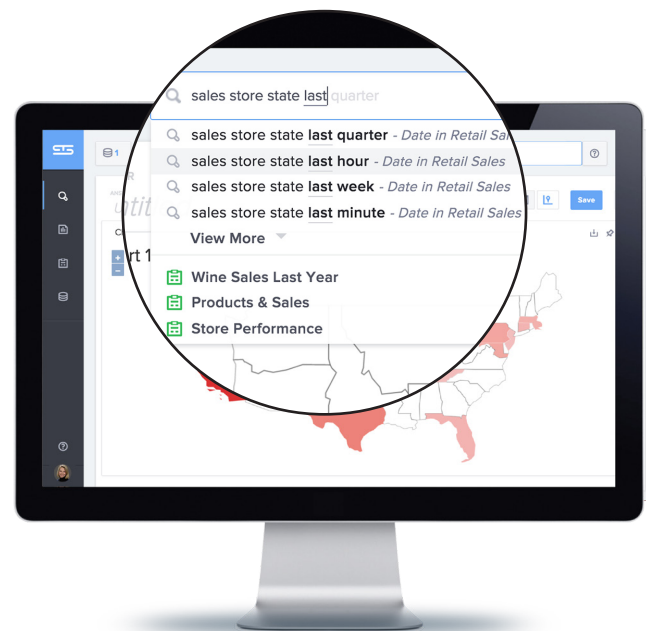

Charts are automatically chosen and appear as you type.

3
Build Your Story
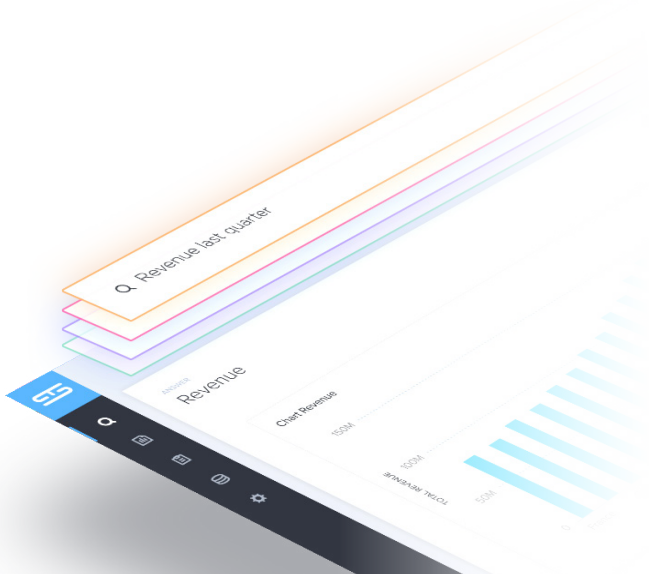

Quickly pin your charts to a live dashboard.

4
Share and Collaborate

Easily share your reports and dashboards with colleagues.

What's Under the Hood

ThoughtSpot combines a revolutionary new relational search engine with the power of a custom-built relational data cache that provides lightning fast responses to queries over billions of rows of data. It can cache data from enterprise databases such as data warehouses and data marts, cloud data sources, processed data from Hadoop clusters, and spreadsheets.

Browser Based UI

Simple, elegant, HTML5-based search interface that offers search suggestions as you type and creates results, visualizations and summaries instantly.

Relational Search Engine

Exploits existing relationships in data to guide the search experience while hiding the complexity of database schemas and queries from the user.
In-memory Relational Data Cache

Fully embedded in-memory columnar data cache for rapid computation on billions of rows, built with an MPP, scale out architecture for speed and scale.

Distributed Cluster Manager

Distributed framework with enterprise-class fault tolerance for software and hardware, built-in monitoring, alerts, single-step upgrade and backup options.

The World's Most Successful Companies Get Instant Answers with ThoughtSpot

FORTUNE 100
RETAILER

950 Hours Saved per Week
