

ThoughtSpot DataFlow

Fast, Code-free Data Ingestion

Bring your enterprise data into ThoughtSpot's in-memory engine for Search & AI-driven Insights

Features

Native Connectors

Choose from dozens of the most common databases, data warehouses, file sources, and applications

Point-and-Click

Build your data sync process with a visual guided experience. No SQL or coding skills required.

Granular Selection

Select only the table columns you want to migrate. There's no need to move entire data sets.

Load Incremental Data

Option to only add new data to existing tables, or overwrite existing tables completely

Data Mapping

Flexibly map columns from the data source to the appropriate columns in ThoughtSpot's in-memory data store

Sync Scheduling

Define granular data sync schedules, down to hourly intervals

TQL Interface

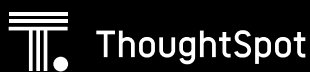

Run custom commands in an embedded TQL editor

Alerts and Monitoring

Monitor your data sync history, view execution logs, and get alerted to problems that need to be addressed
