Regardless of your specific mission, data today is a strategic asset. The ability to fuse vast amounts of data to accelerate the decision-making cycle to guarantee the success of any mission is imperative to maintaining our military advantage. While the value of leveraging data may be understood, the ability to create insights through timely access to data is complicated by the variety of data sources and user interfaces that analysts and knowledge workers are expected to learn. As a result, it can take days, if not weeks to find answers to critical questions.

ThoughtSpot was purpose-built to provide a simple, powerful and intelligent platform that reduces the time it takes to get from question to answer. Organizations across all functional areas can bring the power of search and artificial intelligence to their data to enable service members to make data-driven decisions and rely less on personal experience or intuition.

ThoughtSpot’s innovative analytics platform improves mission effectiveness, readiness, supply chain optimization, logistics, operations and any other functional area where data-driven decision making is needed.
Simple

What’s the one common interface that everyone can use? Answer – the search bar. With Thoughtspot, anyone including airmen, squadron commanders, and general officers can search to analyze billions of rows of data from any source. Answer data calls immediately and enable data-driven decision making and planning across your entire organization including non-technical users.

Smart

ThoughtSpot’s search bar is smart and delivers a familiar, modern search experience. The search bar prompts you, makes suggestions, and guides you to the right answer. For the questions you didn’t know to ask, ThoughtSpot’s AI-driven insights engine SpotIQ provides automated insights on the fly, identifying outliers and anomalies, and lets you auto-analyze your data to discover relevant insights. SpotIQ delivers the most relevant data to the user, optimizing the user experience and empowering everyone with the data that matters most.

Automated

As data has exploded over the last two decades, data analysts have had to spend more time manipulating data rather than using it to drive decisions. ThoughtSpot reduces the time spent collecting the right data and instead provides automated answers through search & AI.

ThoughtSpot’s augmented analytics platform empowers your resources to be more efficient and creates the actionable intelligence necessary to increase mission effectiveness, mitigate threats, and optimize resource deployment.
